

Key facts about

Emergency Contraception

Emergency contraception is a way to prevent pregnancy after sex.

Consider prescribing emergency contraception if a woman:

- didn't use a contraceptive during sex, or
- thinks her contraceptive didn't work.

Two options: pills or IUD insertion.

Emergency Contraceptive Pills

- Plan B™ progestin-only pills
- Preven™ estrogen/progestin pills
- High doses of regular oral contraceptive pills

IUD

- Copper T IUD
- Inserted within **5 days** of unprotected intercourse
- Offers ongoing contraceptive protection

Pills should be started within 72 hours (three days) after unprotected sex.

Emergency contraceptive pills require two doses:

- First dose within 72 hours of unprotected intercourse
- Second dose 12 hours after the first dose

Emergency contraceptive pills are more effective the sooner they are taken.

Safe and effective.

- Progestin-only pills reduce the risk of pregnancy by 89%.*
- Combined estrogen/progestin pills reduce the risk of pregnancy by 75%.*
- For regular, long-term use, most other contraceptive methods are more effective.
- Emergency contraceptive pills do not protect against sexually transmitted diseases, including HIV/AIDS.

*Pregnancy risk reduction based on one-time use. If emergency contraceptive pills were used as a regular method, their effectiveness would be substantially lower.

Won't cause an abortion.

- Emergency contraceptive pills are **NOT** the same as RU-486 (the abortion pill).
- Emergency contraceptive pills are not effective once implantation has begun; they cannot interrupt an established pregnancy.

Won't harm a developing fetus.

- If emergency contraceptive pills are taken inadvertently during pregnancy, they will not harm the developing fetus.
- Using emergency contraceptive pills will not affect a woman's ability to become pregnant in the future.

Women can keep pills at home in case of emergency.

- Many women find it convenient to have emergency contraceptive pills on hand in case of an emergency.
- Medical providers can provide emergency contraceptive pills before they are needed.
- Many pharmacies in Washington can prescribe emergency contraceptive pills. Call 1-888-NOT-2-LATE (1-888-668-2528) or visit www.not-2-late.com.

Dear Colleague,

The Washington State Department of Health (DOH) is pleased to provide camera-ready art for printing this educational material. To ensure that the original quality of the piece is maintained, please read and follow the instructions below and the specifications included for professional printing.

- **Use the latest version.** DOH materials are developed using the most current information available, are checked for clinical accuracy, and are field tested with the intended audience to ensure they are clear and readable. DOH programs make periodic revisions to educational materials, so please check this web site to be sure you have the latest version. DOH assumes no responsibility for the use of this material or for any errors or omissions.
- **Do not alter.** We are providing this artwork with the understanding that it will be printed without alterations and copies will be free to the public. Do not edit the text or use illustrations or photographs for other purposes without first contacting us. Please do not alter or remove any logos, publication numbers or revision dates. If you want to use a part of this publication for other purposes, contact the Office of Health Promotion first.
- **For quality reproduction:** Low resolution PDF files are intended for black and white or color desktop printers. They work best if you are making only one or two copies. High resolution PDF files are intended for reproducing large quantities and are set up for use by professional offset print shops. The high resolution files also include detailed printing specifications. Please match them as closely as possible and insist on the best possible quality for all reproductions.
